

Project Proposal

Project Name :

VetNova

Smart Digital Veterinary Platform

1. Introduction

VetNova is a digital platform for pet owners and veterinary doctors.

It helps users find doctors, book appointments, track pet health, and get emergency support easily.

The main goal of this project is to make pet healthcare services simple and modern in Bangladesh.

2. Problem Statement

Pet owners face many problems such as:

- Hard to find nearby vet doctors
- Long waiting for appointments
- Medical records get lost
- Forgetting vaccine dates
- Emergency blood donor is difficult to find

3. Proposed Solution

VetNova will solve these problems by providing:

- Doctor & clinic finder
- Online appointment booking
- Symptom tracker
- Pet blood bank
- Vaccine reminder
- Emergency service
- Digital health card

4. Objectives

Main Objectives

- Make pet healthcare easier
- Save time for pet owners
- Provide emergency support
- Store pet records digitally

5. Main Features

Doctor & Clinic Finder

Find nearby veterinary doctors and clinics.

Appointment Booking

Book appointments online easily.

Symptom Tracker

Get basic health suggestions using symptoms.

Pet Blood Bank

Find blood donors during emergencies.

Vaccine Reminder

Get reminders for vaccines and medicines.

Emergency Service

Get emergency hospital and ambulance contacts.

Digital Health Card

Store pet medical history digitally.

Login & User Profile

Users can register, login, and manage pet profiles.

6. Technologies Used

Frontend

- HTML
- CSS
- JavaScript
- Bootstrap

Database

- MySQL

7. Expected Outcome

VetNova will help pet owners get veterinary services easily and quickly through one digital platform

8. Conclusion

VetNova is a smart veterinary platform that can improve pet healthcare services in Bangladesh by using modern technology.
